# Biology A (Salters Nuffield)

**Advanced
PAPER 1: The Natural Environment and
Species Survival**

**You must have:**
Calculator, HB pencil, ruler

Total Marks

## Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Show your working in any calculation questions and include units in your answer where appropriate.
- Answer the questions in the spaces provided
  – *there may be more space than you need*.

## Information

- The total mark for this paper is 100.
- The marks for **each** question are shown in brackets
  – *use this as a guide as to how much time to spend on each question*.
- You may use a scientific calculator.
- In questions marked with an **asterisk** (*), marks will be awarded for your ability to structure your answer logically, showing how the points that you make are related or follow on from each other where appropriate.

## Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.
- Good luck with your examination.

*Turn over* ▶

Pearson

**Answer ALL questions.**

**Some questions must be answered with a cross in a box ⊠. If you change your mind about an answer, put a line through the box ⊠ and then mark your new answer with a cross ⊠.**

**1** Climate change has been linked to the release of carbon dioxide from some power stations.

(a) The main reason that carbon dioxide acts as a greenhouse gas is because it

**(1)**

⊠ **A** absorbs infrared radiation reflected by the surface of the Earth

⊠ **B** absorbs ultraviolet radiation reflected by the surface of the Earth

⊠ **C** reflects infrared radiation absorbed by the surface of the Earth

⊠ **D** reflects ultraviolet radiation absorbed by the Earth's atmosphere

(b) Name the plant organelle that fixes carbon dioxide from the atmosphere.

**(1)**

.......................................................................................................................................................................................................................

(c) Net primary productivity (NPP) is a measure of the increase in biomass of a plant.

Explain why respiration affects the production of biomass.

**(2)**

.......................................................................................................................................................................................................................

.......................................................................................................................................................................................................................

.......................................................................................................................................................................................................................

(d) Some power stations burn wood chips instead of fossil fuels to produce electricity.

The photograph shows wood chips at a power station.

© Mr. Amarin Jitnathum/Shutterstock

It is thought that burning wood chips is more beneficial to the environment because in the long term it does not add carbon dioxide to the atmosphere.

Explain why burning wood chips does not increase carbon dioxide to the atmosphere in the long term.

**2** Skulls can be used as evidence for human evolution.

The only type of human present today is the modern human.  In the past, another type of human, called Neanderthal, occupied the same geographical area.

The photograph shows the skulls of both types of human.

Modern human skull                    Neanderthal skull

Genetic studies now show that these two types of human have interbred.

(a)  Only small quantities of DNA can be extracted from the remains of Neanderthal humans.

The quantity of extracted DNA is amplified using

(1)

☒ **A** DNA profiling

☒ **B** polymerase chain reaction

☒ **C** RNA profiling

☒ **D** translation chain reaction

P 6 5 4 5 8 A 0 4 3 2

(b) Devise a procedure, using electrophoresis, to compare the amplified DNA from these two types of human.

(4)

**(Total for Question 2 = 7 marks)**

**3** During the civil war in Mozambique, from 1977 to 1992, 90% of the African elephants were killed for the ivory in their tusks.

Since 1992, the elephant population in Mozambique has increased.

The photograph shows a group of elephants in Mozambique.

Elephant without tusks

Elephant with tusks

© ALEXANDER JOE/Staff/Getty Images

A study of an elephant population in Mozambique was carried out in 2017.

The elephants studied were all born before 1992.

The table shows the number of elephants with and without tusks.

| Elephants | Number of elephants |
|---|---|
| with tusks | 98 |
| without tusks | 102 |

(a) The presence of tusks is controlled by a single gene.  The allele for tusks is known to be dominant.

The frequency of alleles in a population can be determined using the Hardy-Weinberg equation.

Calculate the frequency of the dominant and recessive alleles in this population. Give your answer to 2 decimal places.

**(3)**

Frequency of the dominant allele ...............................................................

Frequency of the recessive allele ...............................................................

(b) In most African elephant populations, 2% to 4% of elephants do not grow tusks.

(i) Explain why the percentage of elephants without tusks in Mozambique will probably increase in the future.

(3)

**(Total for Question 3 = 8 marks)**

**BLANK PAGE**

**4** Fertilisation in humans involves the fusion of a sperm cell with an egg cell.

(a) (i) After the sperm cell nucleus fuses with the egg cell nucleus, the single fertilised cell is described as a

(1)

☒ **A** diploid gamete

☒ **B** diploid zygote

☒ **C** haploid gamete

☒ **D** haploid zygote

(ii) The fertilised cell then divides by

(1)

☒ **A** meiosis to produce genetically different cells

☒ **B** meiosis to produce genetically identical cells

☒ **C** mitosis to produce genetically different cells

☒ **D** mitosis to produce genetically identical cells

(b) Cell division of the fertilised cell produces a ball of totipotent cells.

(i) Give the meaning of the term totipotent cell.

(2)

..............................................................................................................................................................................

..............................................................................................................................................................................

..............................................................................................................................................................................

..............................................................................................................................................................................

(c) Most cases of hereditary spherocytosis are caused by a dominant allele.

Use a genetic diagram to determine the probability of a child inheriting this condition if one parent is heterozygous and the other parent does not have the condition.

(2)

Answer ..............................................................

**(Total for Question 6 = 8 marks)**

**7** The stems of plants contain tissues involved in transport and in support.

(a) The photograph shows a longitudinal section through one plant stem.

E       F               G       H

Cell image library - image ID 38928

(i) Which labelled structure in the photograph contains lignin?

(1)

☒ **A** E

☒ **B** F

☒ **C** G

☒ **D** H

(ii) The diagram shows a transverse section through a plant stem.

J

Which of the labelled structures in the photograph is located in the area labelled J in the diagram?

(1)

☒ **A** E

☒ **B** F

☒ **C** G

☒ **D** H

(b) The photograph shows a cross section of part of the stem of a plant.

Fibres can be extracted from stems similar to this one and used instead of fibres produced from oil-based plastics.

John Bebbington FRPS Science and Plants for schools – https://www.saps.org.uk

(i) The part of the stem labelled L contains

(1)

☒ **A** phloem that transports organic solutes

☒ **B** sclerenchyma fibres that provide support

☒ **C** sieve tubes that transport water

☒ **D** xylem vessels that transport water and mineral ions

(ii) The part of the stem labelled M contains

(1)

☒ **A** phloem that transports organic solutes

☒ **B** sclerenchyma fibres that transport water

☒ **C** sieve tubes that synthesise organic solutes

☒ **D** xylem vessels that transport water and mineral ions

(iii) The structure labelled N is a

**(1)**

⊠ **A** part of the phloem that transports water

⊠ **B** sclerenchyma fibre that provides support

⊠ **C** sieve tube that transports organic solutes

⊠ **D** xylem vessel that transports water and mineral ions

(iv) The line labelled X on the photograph represents the width of the vascular bundle.

The actual width of the vascular bundle is 320 μm.

Calculate the magnification of the image.

**(3)**

Answer .............................................................

(c) Fibres can be extracted from the stems of nettle plants and used to make clothing.

Explain why the production of fibres from nettles is more sustainable than fibres produced from crude oil.

(3)
